VConnect External Booking Detail API

Partner integration guide for reading the same booking detail payload used by the admin Booking Dashboard.

1. Overview

This API exposes booking detail for an external system. The response body matches GET /api/admin/bookings/{bookingId} (AdminBookingDetailDto) used by the Booking Dashboard detail view.

Method	GET
Path	/api/ext/bookings/{bookingId}
Auth	HTTP Basic Authentication
Tenant	Required header: customer-reference (e.g. vconnect)
Content-Type	application/json

2. Environments

Environment	Base URL (example)	Basic Auth username (configured on server)
Staging	https://senucabs.lakmobile.com	vconnect-senu-ext-staging
Production	https://senuportal.lakmobile.com	vconnect-senu-ext-prod

Passwords are configured in the server application profile (application-staging.properties / application-prod.properties) and are provided separately to the partner. Do not commit or email passwords in plain chat.

3. Authentication

Send the Authorization header using HTTP Basic:

Authorization: Basic base64(username:password)

Example (username demo / password secret):

Authorization: Basic ZGVtbzpzZWNyZXQ=

If credentials are missing or wrong, the API returns HTTP 401 with JSON {"isSuccess":false,"errorMessage":"...","dataBundle":null}.

4. header

customer-reference: vconnect

Missing this returns HTTP 400.

---

5. Request example

curl example (staging):

```
curl -u "vconnect-senu-ext-staging:<PASSWORD>" \n  -H "customer-reference: vconnect" \n
"https://senucabs.lakmobile.com/api/ext/bookings/1001158"
```

---

6. Success response

HTTP 200. Envelope:

```
{
  "isSuccess": true,
  "successMessage": "Booking detail loaded",
  "errorMessage": null,
  "dataBundle": { /* AdminBookingDetailDto */ }
}
```

---

7. dataBundle fields (main)

Field	Description
id	Booking ID
status	Booking status (e.g. PAYMENT_COMPLETE)
tripPhase	Active trip phase when applicable
picktime	Pickup date/time
customerName	Customer display name
mobile	WhatsApp / mobile
hireType	0 short / 1 long (as stored)
hireNature	Hire nature label
isShedule	true if scheduled hire
pickDropBrief	Route brief (e.g. Colombo -> Gonapola)
paymentType	Payment type (e.g. CP)
settlementType	Settlement (e.g. CREDIT)
isCorporate	Corporate flag
companyName	Corporate company name
createdBy	Agent / created-by staff id
dispatchBy / dispatchByName	Who dispatched the driver

corporateId / passengerId	Linked ids
cabType, medium, rateType	Vehicle / medium / rate
amount, initialKm, initialHours, initialDays	Originally booked package
addKm, addHours, extPerKm, extPerHour, increment, subTotal, miscRate	Rate breakdown
miscellaneousItems, isCustomRate	Misc / custom package flags
advanceAmount, advancePaymentMethod, advanceNotes, advancePaidAt	Advance payment
driverCommission	Driver commission
remark, staffComments, driverComment	Notes
passengerCount, luggage, weight, promocode	Trip extras
mapRouteLink, leadSource, editCount	Meta
createdAt, acceptedAt, atPlaceAt, pickedUpAt, completedAt, cancelledAt	Timestamps
cancellationReason, senttime	Cancel / sent
driver	Nested driver summary
vehicle	Nested vehicle summary
tripStops	List of route stops
gpsPoints	Trip GPS points (when available)
payment	Trip & payment breakdown
meterReading	Long-hire meter reading (when present)
driverMiscItems	Driver misc expenses
attachments	Presigned attachment URLs
gpsDiagDownloadUrl	Drop-hire GPS diag download URL when present

8. Error responses

HTTP	Meaning
400	Missing customer-reference tenant header
401	Missing/invalid Basic Auth (or Basic Auth not configured on server)
404	Booking not found for the given id in that tenant
500	Unexpected server error

9. Notes for integrators

- Use HTTPS only in staging and production.
- Do not share Basic Auth passwords in source control or client apps that end users can inspect.
- Presigned attachment / GPS diag URLs may expire; re-fetch booking detail if a link fails.
- This endpoint is read-only. It does not create or update bookings.
- The admin UI JWT endpoint remains GET /api/admin/bookings/{id} and is unrelated to this path.
